AMAN DIXIT

+91-8770923503 • LinkedIn • amandixit5102002@gmail.com

Experienced Full Stack Developer proficient in React.js, Node.js, Angular.js, TypeScript, and JavaScript. Excels in crafting user-centric applications, enhancing performance, and delivering scalable, innovative solutions. Passionate about building intuitive and efficient web experiences.

EDUCATION

Medi-Caps University, Indore — Bachelor's of Computer Applications (CGPA: 7.48) **Nov 2020 – Jun 2023**

St. Francis School — 10+2, Maths & Science (70%) **Apr 2019 – Mar 2020**

WORK EXPERIENCE

Full-Stack Developer | Carina Softlabs Inc. **Jun 2024 – Present**

OTT & Music Streaming Platform

- Built a multi-format streaming platform (114K LOC, 36 data models) serving movies, series, music, and short-form video across an Angular admin console, Next.js web app, and mobile client.
- Implemented three concurrent monetization models: subscriptions, per-title rentals, and automated production-house revenue payouts, with webhook-driven Razorpay reconciliation, an auditable payout ledger, and a LightFM-based recommendation engine for personalized discovery.

Tech Stack: *Node.js, Express.js, React.js, Next.js, MongoDB, AWS (MediaConvert, S3), Razorpay.*

Real-Time Multiplayer Game Backend - Link

- Architected the real-time backend for a multiplayer cricket game: Socket.IO match engines, matchmaking, tournament brackets with playoff tie-breaking, and Redis-backed leaderboards across 9 domain modules.
- Authored a 6,200-line technical specification, including a 974-line client-server socket contract, enabling an external Unity client team to integrate independently; containerized the stack with Docker Compose using health-gated service dependencies.

Tech Stack: *Node.js, Express.js, Socket.IO, Redis, MongoDB, Docker, Firebase Cloud Messaging.*

Game Publisher Platform - Link

- Architected a 137K-LOC game publisher platform: moderated community forum, Stripe commerce with in-game item grants, entitlement-gated media via CloudFront signed URLs, and a CMS serving 11 locales across 33 data models.
- Built an AWS Bedrock + Translate AI-assisted localization pipeline with content-hash change detection and a rate-limited queue worker, auto-localizing 13 content types into 10 languages.

Tech Stack: *Node.js, Express.js, Next.js, React.js, MongoDB, AWS (Bedrock, Translate, S3, CloudFront), Stripe, TypeScript.*

Full-Stack Developer Intern | Developer Bazaar Technologies **Dec 2023 – May 2024**

- Engineered algorithmic problem solving and high-performance web applications using ReactJS, seamlessly integrating PHP for data-driven content management. Leveraged Tailwind CSS and Bootstrap to craft visually cohesive, responsive designs while optimizing state management for enhanced scalability.
- Played a key role in Ethereum-based financial solutions, refining token conversion algorithms and transaction workflows. Integrated blockchain tools like MetaMask, Suiet, and Phantom to facilitate secure, decentralized transactions, while enforcing advanced security measures using NordVPN for anonymized financial operations.

MERN Stack Trainee | Dollop Infotech Pvt. Ltd. **Aug 2023 – Nov 2023**

- Mastered algorithmic problem-solving in C and C++, implementing optimized data structures to enhance computational efficiency. Applied advanced programming paradigms to develop high-performance, logic-driven applications.
- Developed responsive, interactive user interfaces with ReactJS, ensuring seamless cross-device functionality. Engineered fluid UI/UX interactions with JavaScript, optimizing rendering performance and accessibility for a frictionless digital experience.

SKILLS

Languages: HTML5, CSS, SCSS, JavaScript (ES6+), TypeScript

Frameworks: React.js, Node.js, Angular.js, Express.js, Next.js, Redux, Tailwind CSS, Bootstrap, Material UI, Shadcn UI, GSAP, Framer Motion, Three.js, Socket.IO, TanStack Query

Databases: MongoDB, PostgreSQL, Redis

Developer Tools: Git, Postman, VS Code, BitBucket, Webpack, RESTful APIs, Chrome DevTools

Cloud & Payments: AWS (EC2, S3, IAM, MediaConvert, Bedrock), Docker, Stripe, Razorpay, Hostinger

PROJECTS

Rolegate | Type-Safe Authorization Library (npm) - Link

Published an open-source, type-safe RBAC library as a dual-package pnpm monorepo (@rolegate/core, @rolegate/express), distributed on npm under the MIT license.

- Leveraged TypeScript const generics to infer permission and role unions directly from config, turning invalid permission strings into compile-time errors instead of silent runtime denials.
- Designed a discriminated AuthorizationDecision type that returns typed denial reasons instead of a boolean, and implemented role inheritance, wildcard grants, and sync/async role resolution.
- Enforced 95% coverage thresholds with 100% branch coverage on the core engine, including type-level tests and a packaging smoke test that validates the published tarball actually installs.
- Automated the release pipeline with Changesets and GitHub Actions across three CI workflows, shipping dual ESM/CJS builds with Express 4 and 5 middleware support.
